

Pearl Priority

Pearl PRIORITY is a large membrane condenser microphone with a fixed cardioid pick-up pattern. The Pearl PRIORITY is equipped with the brand new 2900 single membrane rectangular capsule. The capsule has an unusually large membrane for a single membrane capsule which contributes to the astonishing sonic capabilities of the Pearl PRIORITY.

The frequency response curve of the Pearl PRIORITY is just as flat as all other Pearl microphone products. Pearl PRIORITY is an all-round microphone and can be used for any acoustic instrument or for vocals. However, Pearl PRIORITY's capsule has been deliberately tuned and the frequency curve shows a slight increase (2-3 dB) around 5kHz which corresponds to the "presence increase" often sought after, in particular for vocals.

The Pearl PRIORITY have a large stainless steel housing and features a green LED on the front side of the microphone, which should be appealing to home studio owners and vocalists who can actually see their microphone being powered up. Pearl PRIORITY will be delivered in a smart, whisky-bottle style carton with an additional storage pouch. A simple clip will be included in the delivery, and more elaborate shock-mounts will be available separately.

Pearl PRIORITY comes in a card board tube incl clamp 1820-MG.

Other accessories:

Shockmount USM-L

1820-T

Specification:

Polar pattern	Cardioid
Sensitivity:	17 mV/Pa +/- 1 dB
Frequency response:	20 Hz - 20 kHz
Rec. load imp:	1 Kohms
Impedance:	100 ohms
Operating voltage:	48 volts
Current consumption:	2.3 mA
Self noise:	12 dBA
Max SPL:	126 dB
Dimensions:	135 x 42 mm
Connector:	3-pin XLR
Weight:	250 grams
